DİLARA TOP

EDUCATION

Sakarya University 2022-2026
B.Sc. in Information Systems Engineering
GPA: 3,56/4,00

Highschool 2019-2021
Fachoberschule Holzkirchen Germany

Highschool 2017-2019
Realschule Taufkirchen Germany

INTERNSHIP EXPERIENCE

Business Analyst Intern February 2026 - May 2026
LOGO Yazılım
- Contributed to analysis and documentation processes within the Product Management team using Jira and Confluence.
- Prepared functional analysis documents and mockups for product development and improvement processes.
- Performed API testing and validation using Postman and SoapUI.
- Contributed to the analysis and testing processes of the e-Invoice / e-Document private integrator product..

Product Management Intern August 2025 - September 2025
Mikro Yazılım
- Supported the Product Owner in product management and Agile processes.
- Participated in sprint planning and backlog prioritization activities.
- Contributed to the preparation of product release announcements and version update communications.

Software Development Intern July 2025 - August 2025
LOGO Yazılım
- Contributed to backend development processes within the product development team using C#.
- Performed API testing using Postman and SoapUI.
- Wrote SQL queries and supported database-related processes.

WORK EXPERIENCE

Accounting Office Employee Munich, Germany
Kanzlei Heinrich November 2019 – July 2021
- Recorded companies' income and expense transactions in accounting systems.
- Supported daily accounting operations and data entry processes.

TECHNICAL SKILLS

- Python (OpenCV), C#, C++, Html, CSS, Microsoft SQL Server (MSSQL), PowerBI, MS Office (Excel, Word), Git, Odoo ERP, Jira, Confluence, Postman, SoapUI, Lucidchart

LANGUAGES

- Turkish (Native)
- German (C1)
- English (B2)

SCIENTIFIC PUBLICATIONS

Our research published in international peer-reviewed journals investigates how image-processing-based filter designs for different types of color vision deficiency can improve digital image perception.

- Akalın, F., Özkan Aksoy, N., **Top, D.**, & Kara, E. (2025). Improved Filter Designs Using Image Processing Techniques for Color Vision Deficiency (CVD) Types. Symmetry, 17(7), 1046. https://doi.org/10.3390/sym17071046
- Akalın, F., & **Top, D.** (2025). Proposed Image Processing Filters to Improve Digital Image Perception for Color Blindness Types. Concurrency and Computation: Practice and Experience, First published: July 9, 2025. https://doi.org/10.1002/cpe.70194

COMPETITIONS

TEKNOFEST Semi-Final Presentations – SAU INWO
- Worked on developing an original image processing filter for a project focused on cancer detection from blood cell images.

TÜBİTAK 2209-A Supported Graduation Project
- Development of a Web-Based, AI-Powered Decision Support System for Mpox Diagnosis Using Multimodal Datasets

Kartepe/Kocaeli | dilaratop02@gmail.com | +90 552 605 7441 | linkedin.com/in/dilara-top-815486187 | github.com/diilaraa

PROJECTS

TÜBİTAK 2209-A Supported Graduation Project

- Our project, “Development of a Web-Based, AI-Powered Decision Support System for Mpox Diagnosis Using Multimodal Datasets,” was selected for support under the TÜBİTAK 2209-A University Students Research Projects Support Program.
- Developed Stacking- and Voting-based machine learning models using Scikit-learn for clinical data analysis and a YOLOv9-based deep learning model for dermatological image analysis.
- Developed an original image processing filter using OpenCV to preprocess images for model training and enhance lesion characteristics.
- Integrated the developed models into a web platform using Flask, RESTful APIs, and Jinja2, and developed an interactive dashboard for epidemiological data analysis.

Original Image Processing Filters for Color-Blind Individuals

- Developed original image processing filters using Python, OpenCV, NumPy, Matplotlib, and Seaborn to help color-blind individuals perceive and distinguish colors more accurately in digital images.
- Improved an existing Daltonization algorithm for color vision deficiency.

Real Estate Data Analysis Using Data Mining

- Led the team in data collection, preprocessing, modeling, and optimization processes.
- Worked with a dataset containing over 1,000 samples using Python.
- Compared machine learning algorithms including Logistic Regression, Random Forest, C4.5 Decision Trees, and K-Nearest Neighbors (K-NN) to achieve high predictive accuracy.
- Improved model performance through hyperparameter optimization.

Simple AI System for Autonomous Vehicle Simulation – Unity

- Designed a vehicle capable of reaching its target efficiently using AI algorithms such as Greedy, Uniform Cost Search, and A* as part of a 20-person team project.
- Served as the Data and Optimization Manager, actively contributing to vehicle movement analysis, data collection, and output management.

Pediatric Resident Duty Management System – ASP.NET MVC & Entity Framework

- Developed a web-based system for managing residents, faculty members, and department information through an admin panel, while providing calendar-based duty tracking, appointment scheduling, and emergency announcements through the user panel.
- Developed the system using the Code-First approach with MSSQL as the database.

Database Design and Interface Development

- Designed a database for a fictional company using MSSQL, including the creation of an ER diagram, definition of business rules, and development of tables, relationships, views, stored procedures, and triggers.
- Developed a C# desktop interface and integrated it with the database.
